Method for providing question and answer forum on network site, involves deploying question and answer forum related to particular topic, in several network sites and transmitting questions received from users accessing forum, to expert Original Titles:System and method for supporting multiple question and answer fora in different web sites **Alerting Abstract** ...**NOVELTY** - The method involves deploying question and answer forum related to a particular topic, in several network sites and transmitting questions received from users accessing the forum, to an expert. The response received from the expert, is subsequently sent to the user. ... method of providing answers to questions posted by user; and system for providing question and answer forum on network site. ... USE - For providing question and answer forum related to medical topic on internet, intranet, local area network (LAN), public switched telephone network (PSTN)**Original Publication Data by Authority**Argentina**Publication No. Original Abstracts:**A method and system, executed by a server, is disclosed for receiving questions from users regarding one or more topics and providing answers from a set of experts. Users can direct questions to one or more specific experts, who in turn can answer the questions, refer the questions to other experts, or both. The server automatically organizes and stores questions and answers in various fora dedicated to one or more topics, such as medical treatment for specific health conditions. Responses generated by the experts to the questions asked by the users may, in turn, be reviewed by peer review personnel. The system may be deployed at multiple network sites to provide a question and answer forum to users who visit different sites. Each network site in which the system is deployed may selectively decide whether to post at its network site the responses by experts and/or peer review personnel to questions originating from other network sites. In addition, each network site can selectively decide whether the responses by experts and/or peer review personnel to questions originating at their network site should be permitted to be posted on other network sites. Methods for funding a... the present invention include the provision of advertising banners, receiving subscription payments or fees from user/subscribers for receiving expert opinions, and receiving payments from third party sponsors. Users who access the site may, in turn, receive benefits in exchange for soliciting such expert... **Claims:**1. A method for providing a question and answer forum on at least one network site, the forum being accessible by at least one user and at least one expert, the forum having a topic, the method comprising deploying the question and answer forum at a plurality of network sites.

Abstract:

A computer-based system facilitates exchange of information between users and **expert** respondents. The **users** post **questions** on a topic to a computer bulletin board or **forum**, using a telephone and modem connection to a remote server. The respondents contact the server by telephone, and receive a list of questions that have been **posted**. The respondents then dictate **answers** orally, by telephone, and the answers are recorded and stored by the server as sound files. The stored answers can later be played back by users who connect to the server through their personal computers. The answers can also be transcribed into text files for viewing by the users. Thus, a user can both hear the recorded voice of the respondent and see the stored text of the respondent's answer. The system makes it easy for respondents to answer questions, or provide comments, especially in cases where a respondent is not familiar with computer technology, or where a respondent is not conveniently located near a computer.

Language: English **Document Type:** Conference Paper (PA)

Treatment: Applications (A)

Abstract: With the arrival of Project Vincent on the Iowa State campus during the summer of 1990, came a tremendous consulting burden. It was imperative that they become innovative in their approach to end-user support if they were to survive. Built into Project Vincent (ISU's implementation of MIT's Project Athena) was a means of providing consulting via an electronic mechanism. Online consulting (or OLC) provided a mechanism for any Project Vincent user to submit an open **question** for the **consultants**. While OLC use was gaining acceptance, Iowa State became faced with yet another dilemma: 'How were they going to meet users' needs for support for which they have no expertise, and no foreseeable resources to dedicate to that support?' They turned to a mechanism that had already gained international recognition as a means of finding answers: **newsgroups**. When a new lasergraphics camera was installed on campus, the user services staff was already so overcommitted that it was impractical to assign support duties for the camera. Since the Computation Center had been actively advertising the advantages of **newsgroups**, a local **newsgroup** specifically aimed at the new camera was started. Instead of advertising a name or phone number where users could find help, users were instructed to follow the **newsgroup**. Besides being the platform for submitting questions and obtaining **answers**, **postings** to the **newsgroup** were also used as a means of documentation. After using OLC for several months, systems staff is currently revising the software to provide a number of features missing in the initial implementation. (0 Refs)

Publisher: JOURNAL OF MEDICAL INTERNET RESEARCH, TORONTO GENERAL HOSPITAL, R FRASER ELLIOTT BLDG, 4TH FL, R 4S435, 190 ELIZABETH ST, TORONTO, ON M5G 2C4, CANADA

Language: English Document Type: ARTICLE

Geographic Location: Germany

Journal Subject Category: HEALTH CARE SCIENCES & SERVICES; MEDICAL INFORMATICS

Abstract: Background: Patients increasingly use health portals and Web-based expert forums (ask-the-doctor services), but little is known about the specific needs of Internet users visiting such websites, the nature of their requests, or how satisfied they are with Internet health experts.

Objective: The aim of this study was to analyze the information requests of (mostly female) patients visiting an Internet expert forum on involuntary childlessness and their satisfaction with the experts' feedback.

Methods: We posted an electronic questionnaire on a website hosting an expert forum on involuntary childlessness. The questionnaire was "activated" whenever a visitor sent a question or request to the expert forum. The survey focused on the reasons for visiting the expert forum and whether the visitors were satisfied with the experts' answers to previously posted questions. The free-text questions of visitors who answered the survey were analyzed using Atlas-ti, a software program for qualitative data analysis.

Results: Over a period of 6 months, 513 out of 6 10 visitors (84%) answered the questionnaire. The majority of respondents (65.5%) expected general information about involuntary childlessness, conception, or an evaluation of drugs. Others were concerned about their actual treatment (40.6%) and therapeutic options (28.8%). Out of 225 respondents who had previously contacted the forum, 223 had received an answer, and 123 (55.2%) were satisfied with the experts' answers. About half (105/223) of those users who had previously received an answer from the expert forum stated that they had discussed it with their own doctor. More of these users were satisfied with their subsequent care in fertility clinics than users who did not talk to their doctor about their Internet activities (93.9% vs 76.1%; $P = .015$). According to the qualitative analysis, many requests ($n = 194$) were more or less trivial, especially those for information on basic aspects of reproduction. More than one-third of visitors ($n = 199$) sent detailed results of diagnostic tests and asked for a first or second opinion. Requests to the expert forum were also sent in order to obtain emotional support (17%) or to complain about a doctor (15%).

Conclusions: Visitors who sent their laboratory findings to receive a thorough evaluation or a second opinion had a good command of the opportunities that an expert forum offers. One important expectation of the forum was emotional support, indicating psychological needs that were not met by medical providers. Future websites must find a compromise in order to protect experts from being overwhelmed by general, nonspecific requests while supporting patients with individualized answers.
